

SARVESH N

+91 7708336112 | sarveshnanthakumar99@gmail.com | [LinkedIn](#) | [Github](#) | Coimbatore, Tamil Nadu

Objective

Aspiring Software Engineer with experience in Linux environments, cloud infrastructure, and data processing systems. Skilled in Python, SQL, AWS, and automation tools with hands-on experience building scalable applications and analyzing real-world datasets

Skills

- **Technical:** Python, SQL, Java, FastAPI, Data Annotation, OOP Concept
 - **Version Control & Deployment:** Git, GitHub, Vercel, Netlify, Command Line Tools
 - **Tools & Cloud:** Linux, AWS, Docker, Ollama, Jupyter Notebook, Vim, Power BI, Hugging Face
 - **Others:** Leadership, Communication skills, Mentoring, Team Collaboration, Time Management, Problem Solving, troubleshooting
-

Experience

Freelance Project Developer - Sep 2023 - Sep 2025

- Delivered 7+ mini projects and assisted multiple clients in configuring and provided troubleshooting support and ensured successful project execution within deadlines.

Data Annotation Freelancer - Deccan AI | Jan 2026 - Present

- Evaluated AI model responses against user queries, ensuring accuracy, relevance, and compliance with defined quality metrics.
-

Education

- **B.E in Computer Science and Engineering** - SNS College Of Technology | 2022 - 2026 | CGPA: 7.8
 - **HSC** - Suguna RIP V Matric HR SEC school | 2021-2022 | 75 %
 - **SSLC** - Vimal Jyothi Convent Matriculation HR SEC school | 2019 - 2020 | 71 %
-

Certifications

- Python Programming
 - AWS Solution Architect
-

Projects

IP Checker

- Developed a Streamlit-based tool using Python that analyzes URLs to determine whether a link is legitimate or potentially malicious.
- Implemented WebSockets and Google-based checks to fetch and evaluate real-time information about the given link.

AWS Cost Monitoring Dashboard

- Built a serverless AWS cost monitoring system using AWS Cost Explorer API, Lambda, EventBridge, and S3 to collect and visualize daily and rolling 7-day cloud usage metrics on a dashboard.
- Implemented CloudWatch billing alarms and SNS alerts to detect abnormal Cloud spending and notify users when costs exceed defined thresholds, improving real-time cost visibility and control.

AWS Serverless Log Processing Pipeline

- Built an event-driven log processing pipeline using S3, Lambda, SQS, and DynamoDB to ingest, process, and store application logs at scale.
 - Implemented real-time error detection with SNS alerts and secure IAM role permissions, improving system observability and automated incident notification.
-

Extracurricular Activities

Foss enthusiast | Problem Solving – Hacker rank, code chef, Leetcode | Sports – Handball, Football, Shotput
